

# FITNESS LIFESTYLE

Setting trends instead of following them: As "road bikes with linear handlebar", the SPEEDER models serve fitness-orientated bike fans who want to combine athletic activity with suitability for everyday use. Or do you need the adequate style for city rides? Our minimalist S-PRESSO impresses with timeless elegance. MERIDA – MORE STATE OF THE ART.

# SPEEDER

FITNESS

The modern term "deceleration" is definitely not part of your vocabulary? The motto "I am always up front" does apply to you? What a great attitude. Because it can be good for you to open the "body throttle" beyond your office or everyday stress and to counteract the threatening fatigue of your latently underchallenged condition. If you close your eyes and imagine the optimal device for such purposes, you perhaps have a sudden inspiration in form of a road racer. But MERIDA keeps in readiness an attractive alternative: Our SPEEDERs are virtually road machines with linear handlebars and additional fitnesses. Completely redesigned for 2014, they satisfy your desire for intensive training and offer comprehensive suitability for everyday use as well.

The new SPEEDER geometry combines all essential approaches of MERIDA's concept for fast bikes in daily use: Sportiness on the one hand, comfort on the other. Thus the moderately shorter top tube is complemented by an extended headtube. This results in still an athletic but not too stretched seating position – excellent for long training rounds. The slim seat stays provide maximum rearstay comfort. The latter as well as the SPEEDER's traction can be increased by the optional utilization of tyres with a width of up to 28 mm. The spanned top tube provides an athletically aggressive look elegantly kept clean by the internal routing of the shifter cables. In addition, installation eyelets for fenders and mounts for a carrier underline the very versatile character of this high-speed bike. *Accelerating your everyday life: the MERIDA SPEEDER.*
